

LEANNE KIM

Waterloo, ON, Canada

✉ leanne.kim.tech@gmail.com |  linkedin.com/in/sooyeunleanne |  sooyeunleanne.github.io

SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, C/C++, HTML/CSS

Data & Cloud: PostgreSQL, MongoDB, AWS, Azure (Cloud, Red Hat OpenShift), GCP, Supabase

DevOps & Tools: Kubernetes, OpenShift, Docker, GitHub Actions, Git, Postman, JIRA/Confluence, Claude Code

Frameworks & Libraries: React/React Native, Next.js, Node.js, Express.js, Angular, Vue.js, Django, Spring Boot, TailwindCSS, FastAPI, Scikit Learn, Pandas

EDUCATION

University of Waterloo

Sep 2023 – Apr 2028

Bachelor of Engineering, Systems Design Engineering, Option in Software Engineering

Technical University of Denmark

Sep 2026 – Dec 2026

Exchange Student, Systems Design Engineering

EXPERIENCE

Software Engineer Intern | CIBC

Jan – Apr 2026 | *Toronto, ON*

- Accelerated deployment by **5h to 30min**, replacing a manual ARO console workflow with a **GitHub Actions CI/CD pipeline** that builds and pushes **Docker** images to Docker Hub
- Programmed a **Python** script to **auto-generate sanity test** files by updating parameters at fixed template positions, eliminating manual editing and cutting validation time by **95%**
- Streamlined daily test environment setup from **20min to 1min** with a **Linux** script that pattern-matches and propagates the **ARO_token** field across **9 QA** test scripts

Software Engineer Intern | CI Technologies

May – Aug 2025 | *Vancouver, BC*

- Engineered a **cross-application marketplace platform** enabling template creation and sharing across **4** internal applications, cutting setup time by **92%**
- Consolidated duplicate templates from **5K+ to 1–2 per organization** by designing a **unified data model** for **5 DB** schemas with **backward compatibility**
- Fixed a timing-out dashboard for **1.1K+ agencies** worldwide, replacing full-table scans of **400K+ total records** with **pagination and caching**, cutting load time by **65%**

Full Stack Developer Intern | InvestMint

Sep 2024 – Apr 2025 | *Toronto, ON*

- Expedited client onboarding from **3 days to 5min** by replacing email-based intake and CEO-run Python scripts with a self-service form, helping scale customer acquisition by **5x**
- Wired an internal **Python ETF engine** into the backend, removing a script-editing bottleneck and displaying results in a real-time **React** dashboard for **\$10K+** investment decisions
- Built an internal **cash liquidity calculator** with **xlsx.js**, replacing external-website-based report generation and formatting/QA, cutting report generation time by **87%**

PROJECTS

WatGuessr.io | *Vue.js, AWS S3, Node.js, Java, Spring Boot, PostgreSQL, WebSockets*

- Built a **real-time multiplayer platform** over **STOMP/SockJS**, broadcasting server-computed state snapshots and synchronizing round progression across **750+** users via a **readiness barrier**
- Cut round load time by **67%**, optimizing **Mapbox** gameplay with OSM building detection and **IndexedDB** caching
- Built stateless **JWT authentication** via Spring Security's **OAuth2** resource server, alongside **BCrypt** hashing, **Google OAuth 2.0**, and **Bucket4j** rate limiting

AI Closet Assistant App | *Next.js, TypeScript, Gemini APIs, MongoDB Atlas, Auth0, ElevenLabs*

- Constructed a multimodal AI platform in **<24 hours** using the **Gemini API** for vision-based **wardrobe tagging**, image-generation **virtual try-on**, and structured-prompt **outfit suggestions**
- Developed a **deterministic outfit-matching algorithm** (weighing color, occasion, style, material, and weather) plus a normalized Closet Health score surfaced via an ElevenLabs **voice assistant**
